

On borrowed time

After winning a bid for the crushing and screening of six borrow pits alongside one of South Africa's national roads, Renico Plant Hire took delivery of a Terex Finlay J-1175 jaw crusher and a Terex Finlay 683 Supertrak from Pilot Crushtec in a deal worth R5,9-million. The machines are able to produce between 210 tph and 250 tph of a -40 product in a very tight time frame. A complete crushing-and-screening plant can, typically, be set up and operate at full capacity

The machines helped Renico Plant Hire set up in a limited time frame.

within hours from arrival on site. "That's why the Terex Finlays were a perfect solution for this highly demanding project," says Nicolan Govender, Pilot Crushtec's national sales manager. "Traditionally, a customer would feed a primary crusher, usually a jaw crusher, then feed the crushed rock into a

secondary cone crusher and then feed onto a screen. However, in this project, two mobile jaw crushers were used to feed directly onto the Terex Finlay 683 screen with oversize reporting into a cone crusher."

Gert Brits, plant manager for Renico, says that this methodology worked

particularly well as it was able to extract product out of the screen and the cone without any rehandling of rock which saved high costs. "The project began in June 2009 and we have approximately three more months to go before completion, and the crushers are going strong," says Brits.

Lighter, faster and more powerful !
The new EH25 "BRUSHLESS" breaker by Wacker Neuson

Durability - The asynchronous motor with BRUSHLESS drive is maintenance free. Automatic voltage compensation protects against under- and over voltages resulting in no more BURNOUTS.

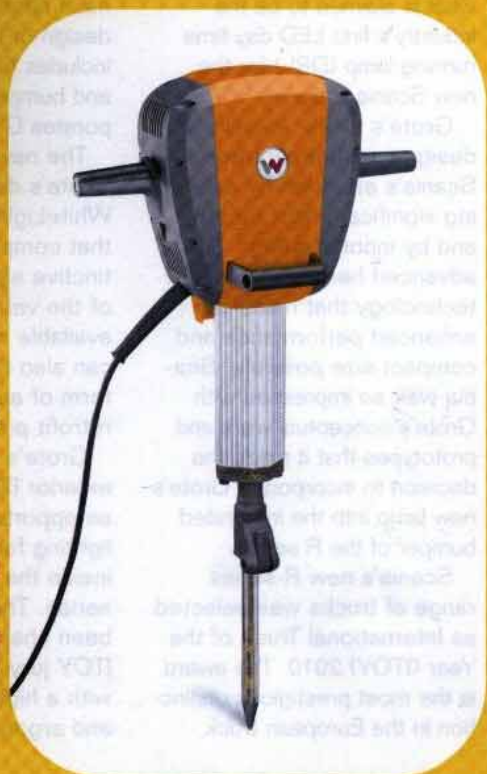

Performance - 70 joule impact force delivering highest demolition rate

Lightest operating weight - At 25kg the lightest breaker in its performance class.

Best comfort - Highest operator comfort with less than 5m/s² Hand Arm Vibration rating
